

**GAME CREEK VIDEO  
JOB DESCRIPTION**

---

TITLE: Application Developer

DEPARTMENT: Office

JOB LOCATION: Hudson, NH

INCUMBENT'S NAME: Addition

REPORTS TO: IT Director

---

**POSITION OVERVIEW:**

Join our team as Application Developer and be responsible for designing, coding, maintaining, and debugging custom web-based applications within a unique IT framework that serves as the hub for driving our core business each day. You will collaborate with the Sr. Application Developer on new and existing features on our custom-built applications and systems. Our systems allow us to manage pertinent information regarding all aspects of the business, including event information, scheduling of mobile units and people resources, maintenance & repair initiatives, inventory control, expense management, and more. You will work, primarily, with the LAMP stack, APIs, and microservices that integrate our custom applications with other applications. You will also field employee feedback and provide application support in the form of bug fixes and application maintenance.

**5 KEY RESULTS THAT DEFINES SUCCESS IN THIS JOB:**

- Improved Product & Service Innovation
- Efficient and Reliable Applications Management
- Practitioner of Training & Development
- Improved Customer Experience
- DevOps Champion

**YOUR RESPONSIBILITIES:**

- Work within Agile framework on a small team to meet programming assignment goals and objectives in a timely and accurate manner
- Code, test, debug, and document new and existing task-specific modules for application systems
- Maintain existing applications, including our custom scheduling and inventory/repair systems
- Use coding methods that are optimized for performance and readability
- Provide on-going progress reports to IT Director
- Prioritize and execute tasks based on environmental and business factors
- Monitor applications for expected performance and respond to errors and user feedback
- Take independent action to identify and correct problems encountered during application operations within parameters set forth by the IT Director

- Maintain up-to-date knowledge of latest web technologies and make recommendations to more effectively use IT resources and improve application workflow
- Participate in future application design specifications
- Other assigned duties as required

#### **WHAT WE'RE LOOKING FOR:**

- BS in Computer Science, Information Technology, or similar field
- 5-7 years of experience in web-based application design; experience gained through internships or consulting projects will be considered
- Must have excellent application design and documentation skills
- Take initiatives to become familiar with Game Creek Video's core business to better understand the goals of the applications
- Utilize creativity to help invent new ways of approaching problems and developing innovative solutions
- Demonstrated ability to handle multiple tasks and adapt to a constantly-changing work environment
- Effective verbal and written communication skills; communicate pertinent IT-related information thoroughly and effectively with all levels of the company in a timely manner
- Must be organized, detail-oriented, and possess a high degree of accuracy
- Motivated team player; excellent interpersonal skills and ability to interact with others in ways that enhance cooperation amongst team members

#### **TECHNICAL QUALIFICATIONS:**

- Proficient knowledge of PHP, Javascript, CSS, HTML, AJAX, WordPress, relational databases (PostGres), and OOP
- Prior work with AWS, Google Workspace applications and API
- Understanding of networking, including hardware, routing, security, OpenVPN, and VOIP, IoT integrations
- Ability to provide a sample of PHP and JavaScript code written in the last 12 months
- Familiarity with Atlassian tools (Jira and Confluence), Git, XML, JSON, Bootstrap, JQuery, Angular, Data Tables, RESTful API, Swagger, Katalon, Unit and automation testing
- Mobile application development for IOS and Android in Xamarin is a plus
